

Marketplace Return and Evidence Policy

1. Customer protection

A return reported within the policy window should be handled in good faith. Seller communications must not accuse the buyer or imply intent without definitive platform findings.

For damaged or incomplete returns, sellers may request review or partial refund when supported by receiving photos, weight data, and order records.

2. Evidence requirements

Evidence type	Use	Limit
Carrier scans	Show custody and weight events	Do not prove package contents alone
Warehouse photos	Show packed contents if timestamped and tied to order	Must match SKU and label
Return center photos	Show returned contents and condition	Ambiguous photos should be described cautiously

3. Resolution guidance

Full refund is appropriate when the seller cannot substantiate missing components or when carrier damage caused the issue.

Partial refund or dispute review is appropriate when the returned contents are incomplete and outbound evidence is stronger than return evidence.

Request more evidence when a buyer claim conflicts with sealed-return or scan data but the case lacks enough proof for a firm denial.

Batch evidence packs should make an order-level decision; do not apply the same action to all returns simply because one case is strong.

4. SLA and communication

Customer-safe responses must acknowledge the issue, state the next action, and avoid accusation words. Carrier claims and platform review notes can be internal.

When the marketplace SLA is under 24 hours, choose a provisional customer-safe action and preserve internal evidence for follow-up.

Appendix A. Operational Review Checklist

Checkpoint	Reviewer action	Common failure mode
A1	Confirm the local source evidence supports the decision under Marketplace Return and Evidence Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A2	Confirm the local source evidence supports the decision under Marketplace Return and Evidence Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A3	Confirm the local source evidence supports the decision under Marketplace Return and Evidence Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A4	Confirm the local source evidence supports the decision under Marketplace Return and Evidence Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A5	Confirm the local source evidence supports the decision under Marketplace Return and Evidence Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A6	Confirm the local source evidence supports the decision under Marketplace Return and Evidence Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A7	Confirm the local source evidence supports the decision under Marketplace Return and Evidence Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A8	Confirm the local source evidence supports the decision under Marketplace Return and Evidence Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A9	Confirm the local source evidence supports the decision under Marketplace Return and Evidence Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A10	Confirm the local source evidence supports the decision under Marketplace Return and Evidence Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A11	Confirm the local source evidence supports the decision under Marketplace Return and Evidence Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A12	Confirm the local source evidence supports the decision under Marketplace Return and Evidence Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.

Appendix B. Evidence Traceability Examples

Example 1: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Return and Evidence Policy without naming the operative rule, source record, or conflicting field.

Example 2: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Return and Evidence Policy without naming the operative rule, source record, or conflicting field.

Example 3: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Return and Evidence Policy without naming the operative rule, source record, or conflicting field.

Example 4: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Return and Evidence Policy without naming the operative rule, source record, or conflicting field.

Example 5: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Return and Evidence Policy without naming the operative rule, source record, or conflicting field.

Example 6: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Return and Evidence Policy without naming the operative rule, source record, or conflicting field.

Example 7: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Return and Evidence Policy without naming the operative rule, source record, or conflicting field.

Example 8: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Return and Evidence Policy without naming the operative rule, source record, or conflicting field.

Example 9: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Return and Evidence Policy without naming the operative rule, source record, or conflicting field.

Example 10: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Return and Evidence Policy without naming the operative rule, source record, or conflicting field.

Appendix C. Boundary Conditions and Tolerances

Boundary condition 1: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 2: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 3: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 4: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 5: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 6: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 7: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 8: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.
