

Listing Quality and Restricted Claims Policy

1. Title and promotional content

Titles must identify the product and must not contain Best Seller, delivery speed, discount, time-sensitive promotion, or review language.

2. Performance claims

Thermal, leak, cleaning, durability, and safety claims require evidence for the exact SKU and component scope.

3. Image text

Main and supporting images must not include promotional discount text or time-sensitive offer claims.

4. Backend keywords and competitor references

Search terms, subject matter keywords, and descriptions must not use competitor brands, delivery promises, time-sensitive promotions, or unsupported safety/environmental claims.

5. Recovery submissions

A recovery note should describe changed fields, evidence used, and any evidence still missing.

Appendix A. Operational Review Checklist

Checkpoint	Reviewer action	Common failure mode
A1	Confirm the local source evidence supports the decision under Listing Quality and Restricted Claims Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A2	Confirm the local source evidence supports the decision under Listing Quality and Restricted Claims Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A3	Confirm the local source evidence supports the decision under Listing Quality and Restricted Claims Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A4	Confirm the local source evidence supports the decision under Listing Quality and Restricted Claims Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A5	Confirm the local source evidence supports the decision under Listing Quality and Restricted Claims Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A6	Confirm the local source evidence supports the decision under Listing Quality and Restricted Claims Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A7	Confirm the local source evidence supports the decision under Listing Quality and Restricted Claims Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A8	Confirm the local source evidence supports the decision under Listing Quality and Restricted Claims Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A9	Confirm the local source evidence supports the decision under Listing Quality and Restricted Claims Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A10	Confirm the local source evidence supports the decision under Listing Quality and Restricted Claims Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A11	Confirm the local source evidence supports the decision under Listing Quality and Restricted Claims Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A12	Confirm the local source evidence supports the decision under Listing Quality and Restricted Claims Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.

Appendix B. Evidence Traceability Examples

Example 1: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Listing Quality and Restricted Claims Policy without naming the operative rule, source record, or conflicting field.

Example 2: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Listing Quality and Restricted Claims Policy without naming the operative rule, source record, or conflicting field.

Example 3: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Listing Quality and Restricted Claims Policy without naming the operative rule, source record, or conflicting field.

Example 4: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Listing Quality and Restricted Claims Policy without naming the operative rule, source record, or conflicting field.

Example 5: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Listing Quality and Restricted Claims Policy without naming the operative rule, source record, or conflicting field.

Example 6: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Listing Quality and Restricted Claims Policy without naming the operative rule, source record, or conflicting field.

Example 7: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Listing Quality and Restricted Claims Policy without naming the operative rule, source record, or conflicting field.

Example 8: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Listing Quality and Restricted Claims Policy without naming the operative rule, source record, or conflicting field.

Example 9: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Listing Quality and Restricted Claims Policy without naming the operative rule, source record, or conflicting field.

Example 10: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Listing Quality and Restricted Claims Policy without naming the operative rule, source record, or conflicting field.

Appendix C. Boundary Conditions and Tolerances

Boundary condition 1: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 2: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 3: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 4: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 5: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 6: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 7: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 8: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.
