

# Carrier Air/Ground Dangerous Goods Rules

## 1. General rule

Ship-status decisions must be based on UN number, hazard class, quantity, packaging, and required marks.

## 2. Air restrictions

| Class                   | Air rule                                                                                    | Ground rule                                                     |
|-------------------------|---------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| 2.1 Aerosol             | Air prohibited without approved limited-quantity program and pressure/aerosol documentation | Ground allowed with limited quantity mark if quantity limit met |
| Class 9 lithium battery | Air allowed only with Wh rating, battery handling mark, and compliant state-of-charge       | Ground allowed with lithium mark                                |
| Class 5.1 oxidizer      | Air prohibited unless fully documented and approved                                         | Ground may be allowed with packaging docs                       |

## 3. Limited quantity and documentation exceptions

| Material                          | Exception path                                                                   | Required evidence                                                                        |
|-----------------------------------|----------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|
| Class 3 alcohol consumer quantity | Ground limited quantity may be allowed                                           | SDS section 14, volume per inner, absorbent/leakproof packaging, limited quantity mark   |
| UN3481 battery with equipment     | Air may be allowed when installed/packed with equipment and under carrier limits | Wh rating, battery mark, equipment packing method, package test/short-circuit protection |
| Not regulated SKU in mixed bundle | Allowed only when shipped alone or with non-DG components                        | Bundle composition and pick-pack record                                                  |

#### **4. Packaging marks**

Limited quantity diamond, lithium battery handling mark, orientation arrows where applicable, and emergency contact must be visible when rules require them.

## Appendix A. Operational Review Checklist

| Checkpoint | Reviewer action                                                                                         | Common failure mode                                                                                |
|------------|---------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| A1         | Confirm the local source evidence supports the decision under Carrier Air/Ground Dangerous Goods Rules. | Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule. |
| A2         | Confirm the local source evidence supports the decision under Carrier Air/Ground Dangerous Goods Rules. | Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule. |
| A3         | Confirm the local source evidence supports the decision under Carrier Air/Ground Dangerous Goods Rules. | Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule. |
| A4         | Confirm the local source evidence supports the decision under Carrier Air/Ground Dangerous Goods Rules. | Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule. |
| A5         | Confirm the local source evidence supports the decision under Carrier Air/Ground Dangerous Goods Rules. | Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule. |
| A6         | Confirm the local source evidence supports the decision under Carrier Air/Ground Dangerous Goods Rules. | Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule. |
| A7         | Confirm the local source evidence supports the decision under Carrier Air/Ground Dangerous Goods Rules. | Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule. |
| A8         | Confirm the local source evidence supports the decision under Carrier Air/Ground Dangerous Goods Rules. | Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule. |
| A9         | Confirm the local source evidence supports the decision under Carrier Air/Ground Dangerous Goods Rules. | Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule. |
| A10        | Confirm the local source evidence supports the decision under Carrier Air/Ground Dangerous Goods Rules. | Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule. |
| A11        | Confirm the local source evidence supports the decision under Carrier Air/Ground Dangerous Goods Rules. | Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule. |
| A12        | Confirm the local source evidence supports the decision under Carrier Air/Ground Dangerous Goods Rules. | Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule. |

## **Appendix B. Evidence Traceability Examples**

Example 1: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Carrier Air/Ground Dangerous Goods Rules without naming the operative rule, source record, or conflicting field.

Example 2: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Carrier Air/Ground Dangerous Goods Rules without naming the operative rule, source record, or conflicting field.

Example 3: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Carrier Air/Ground Dangerous Goods Rules without naming the operative rule, source record, or conflicting field.

Example 4: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Carrier Air/Ground Dangerous Goods Rules without naming the operative rule, source record, or conflicting field.

Example 5: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Carrier Air/Ground Dangerous Goods Rules without naming the operative rule, source record, or conflicting field.

Example 6: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Carrier Air/Ground Dangerous Goods Rules without naming the operative rule, source record, or conflicting field.

Example 7: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Carrier Air/Ground Dangerous Goods Rules without naming the operative rule, source record, or conflicting field.

Example 8: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Carrier Air/Ground Dangerous Goods Rules without naming the operative rule, source record, or conflicting field.

Example 9: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Carrier Air/Ground Dangerous Goods Rules without naming the operative rule, source record, or conflicting field.

Example 10: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Carrier Air/Ground Dangerous Goods Rules without naming the operative rule, source record, or conflicting field.

## **Appendix C. Boundary Conditions and Tolerances**

Boundary condition 1: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 2: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 3: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 4: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 5: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 6: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 7: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 8: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.
