

Marketplace Dangerous Goods Listing Policy

1. Listing obligations

Sellers must classify products using SDS and transport data before enabling fulfilment methods.

2. Blocked pending documentation

If SDS section 14 is missing or packaging evidence conflicts with the listing, block shipment pending documentation.

3. Customer-facing content

Do not imply unrestricted fast air delivery for regulated SKUs.

Appendix A. Operational Review Checklist

Checkpoint	Reviewer action	Common failure mode
A1	Confirm the local source evidence supports the decision under Marketplace Dangerous Goods Listing Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A2	Confirm the local source evidence supports the decision under Marketplace Dangerous Goods Listing Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A3	Confirm the local source evidence supports the decision under Marketplace Dangerous Goods Listing Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A4	Confirm the local source evidence supports the decision under Marketplace Dangerous Goods Listing Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A5	Confirm the local source evidence supports the decision under Marketplace Dangerous Goods Listing Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A6	Confirm the local source evidence supports the decision under Marketplace Dangerous Goods Listing Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A7	Confirm the local source evidence supports the decision under Marketplace Dangerous Goods Listing Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A8	Confirm the local source evidence supports the decision under Marketplace Dangerous Goods Listing Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A9	Confirm the local source evidence supports the decision under Marketplace Dangerous Goods Listing Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A10	Confirm the local source evidence supports the decision under Marketplace Dangerous Goods Listing Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A11	Confirm the local source evidence supports the decision under Marketplace Dangerous Goods Listing Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A12	Confirm the local source evidence supports the decision under Marketplace Dangerous Goods Listing Policy.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.

Appendix B. Evidence Traceability Examples

Example 1: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Dangerous Goods Listing Policy without naming the operative rule, source record, or conflicting field.

Example 2: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Dangerous Goods Listing Policy without naming the operative rule, source record, or conflicting field.

Example 3: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Dangerous Goods Listing Policy without naming the operative rule, source record, or conflicting field.

Example 4: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Dangerous Goods Listing Policy without naming the operative rule, source record, or conflicting field.

Example 5: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Dangerous Goods Listing Policy without naming the operative rule, source record, or conflicting field.

Example 6: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Dangerous Goods Listing Policy without naming the operative rule, source record, or conflicting field.

Example 7: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Dangerous Goods Listing Policy without naming the operative rule, source record, or conflicting field.

Example 8: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Dangerous Goods Listing Policy without naming the operative rule, source record, or conflicting field.

Example 9: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Dangerous Goods Listing Policy without naming the operative rule, source record, or conflicting field.

Example 10: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked Marketplace Dangerous Goods Listing Policy without naming the operative rule, source record, or conflicting field.

Appendix C. Boundary Conditions and Tolerances

Boundary condition 1: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 2: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 3: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 4: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 5: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 6: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 7: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 8: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.
