

SDS - Ceramic mug

1. Identification

Product identifier: CERAMIC-MUG. Recommended use: ecommerce consumer product.

2. Hazard identification

Transport hazard summary: Not regulated. Hazard class: None.

3. Composition and physical properties

This local SDS is generated for benchmark review and contains the fields needed for shipping classification.

4. Transport information

Field	Value
UN number	Not regulated
Proper shipping name	Ceramic mug
Hazard class	None
Packing group	N/A
Special note	No dangerous goods restrictions.

5. Regulatory information

Use this SDS together with carrier and marketplace rules. Marketing names do not override transport section data.

Appendix A. Operational Review Checklist

Checkpoint	Reviewer action	Common failure mode
A1	Confirm the local source evidence supports the decision under SDS - Ceramic mug.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A2	Confirm the local source evidence supports the decision under SDS - Ceramic mug.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A3	Confirm the local source evidence supports the decision under SDS - Ceramic mug.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A4	Confirm the local source evidence supports the decision under SDS - Ceramic mug.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A5	Confirm the local source evidence supports the decision under SDS - Ceramic mug.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A6	Confirm the local source evidence supports the decision under SDS - Ceramic mug.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A7	Confirm the local source evidence supports the decision under SDS - Ceramic mug.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A8	Confirm the local source evidence supports the decision under SDS - Ceramic mug.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A9	Confirm the local source evidence supports the decision under SDS - Ceramic mug.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A10	Confirm the local source evidence supports the decision under SDS - Ceramic mug.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A11	Confirm the local source evidence supports the decision under SDS - Ceramic mug.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A12	Confirm the local source evidence supports the decision under SDS - Ceramic mug.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.

Appendix B. Evidence Traceability Examples

Example 1: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Ceramic mug without naming the operative rule, source record, or conflicting field.

Example 2: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Ceramic mug without naming the operative rule, source record, or conflicting field.

Example 3: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Ceramic mug without naming the operative rule, source record, or conflicting field.

Example 4: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Ceramic mug without naming the operative rule, source record, or conflicting field.

Example 5: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Ceramic mug without naming the operative rule, source record, or conflicting field.

Example 6: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Ceramic mug without naming the operative rule, source record, or conflicting field.

Example 7: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Ceramic mug without naming the operative rule, source record, or conflicting field.

Example 8: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Ceramic mug without naming the operative rule, source record, or conflicting field.

Example 9: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Ceramic mug without naming the operative rule, source record, or conflicting field.

Example 10: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Ceramic mug without naming the operative rule, source record, or conflicting field.

Appendix C. Boundary Conditions and Tolerances

Boundary condition 1: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 2: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 3: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 4: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 5: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 6: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 7: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 8: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.
