

SDS - Lithium-ion power bank

1. Identification

Product identifier: POWERBANK-20K. Recommended use: ecommerce consumer product.

2. Hazard identification

Transport hazard summary: UN3480 Lithium ion batteries. Hazard class: Class 9.

3. Composition and physical properties

This local SDS is generated for benchmark review and contains the fields needed for shipping classification.

4. Transport information

Field	Value
UN number	UN3480 Lithium ion batteries
Proper shipping name	Lithium-ion power bank
Hazard class	Class 9
Packing group	N/A
Special note	Air shipment requires lithium battery handling mark and Wh documentation.

5. Regulatory information

Use this SDS together with carrier and marketplace rules. Marketing names do not override transport section data.

Appendix A. Operational Review Checklist

Checkpoint	Reviewer action	Common failure mode
A1	Confirm the local source evidence supports the decision under SDS - Lithium-ion power bank.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A2	Confirm the local source evidence supports the decision under SDS - Lithium-ion power bank.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A3	Confirm the local source evidence supports the decision under SDS - Lithium-ion power bank.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A4	Confirm the local source evidence supports the decision under SDS - Lithium-ion power bank.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A5	Confirm the local source evidence supports the decision under SDS - Lithium-ion power bank.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A6	Confirm the local source evidence supports the decision under SDS - Lithium-ion power bank.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A7	Confirm the local source evidence supports the decision under SDS - Lithium-ion power bank.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A8	Confirm the local source evidence supports the decision under SDS - Lithium-ion power bank.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A9	Confirm the local source evidence supports the decision under SDS - Lithium-ion power bank.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A10	Confirm the local source evidence supports the decision under SDS - Lithium-ion power bank.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A11	Confirm the local source evidence supports the decision under SDS - Lithium-ion power bank.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.
A12	Confirm the local source evidence supports the decision under SDS - Lithium-ion power bank.	Treating sales notes, marketing copy, or screenshots as stronger evidence than the governing rule.

Appendix B. Evidence Traceability Examples

Example 1: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Lithium-ion power bank without naming the operative rule, source record, or conflicting field.

Example 2: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Lithium-ion power bank without naming the operative rule, source record, or conflicting field.

Example 3: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Lithium-ion power bank without naming the operative rule, source record, or conflicting field.

Example 4: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Lithium-ion power bank without naming the operative rule, source record, or conflicting field.

Example 5: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Lithium-ion power bank without naming the operative rule, source record, or conflicting field.

Example 6: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Lithium-ion power bank without naming the operative rule, source record, or conflicting field.

Example 7: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Lithium-ion power bank without naming the operative rule, source record, or conflicting field.

Example 8: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Lithium-ion power bank without naming the operative rule, source record, or conflicting field.

Example 9: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Lithium-ion power bank without naming the operative rule, source record, or conflicting field.

Example 10: A compliant review cites the exact local file, page or section, and data field used for the conclusion. A non-compliant review merely says that the reviewer checked SDS - Lithium-ion power bank without naming the operative rule, source record, or conflicting field.

Appendix C. Boundary Conditions and Tolerances

Boundary condition 1: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 2: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 3: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 4: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 5: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 6: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 7: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.

Boundary condition 8: When two local inputs conflict, the task-specific governing policy and the most source-specific evidence should control. Internal business requests are useful context but do not override policy, product scope, certificate scope, or audited numeric evidence.
